Curacorn

Curacorn is an injection of hyaluronic acid (HA) used to cushion underneath the corn to alleviate symptoms, reduce the need for routine podiatry treatments; and, in some cases completely resolve the corn. It usually lasts 6-18 months but also can be permanent.

Who is suitable for?

Those with a persistent long-standing corn which has failed to resolve with other methods. It may not work as effectively for corns on bony / joint areas such as the tops of the toes, as sometimes there is not enough space under the skin at these areas for the gel to sit.

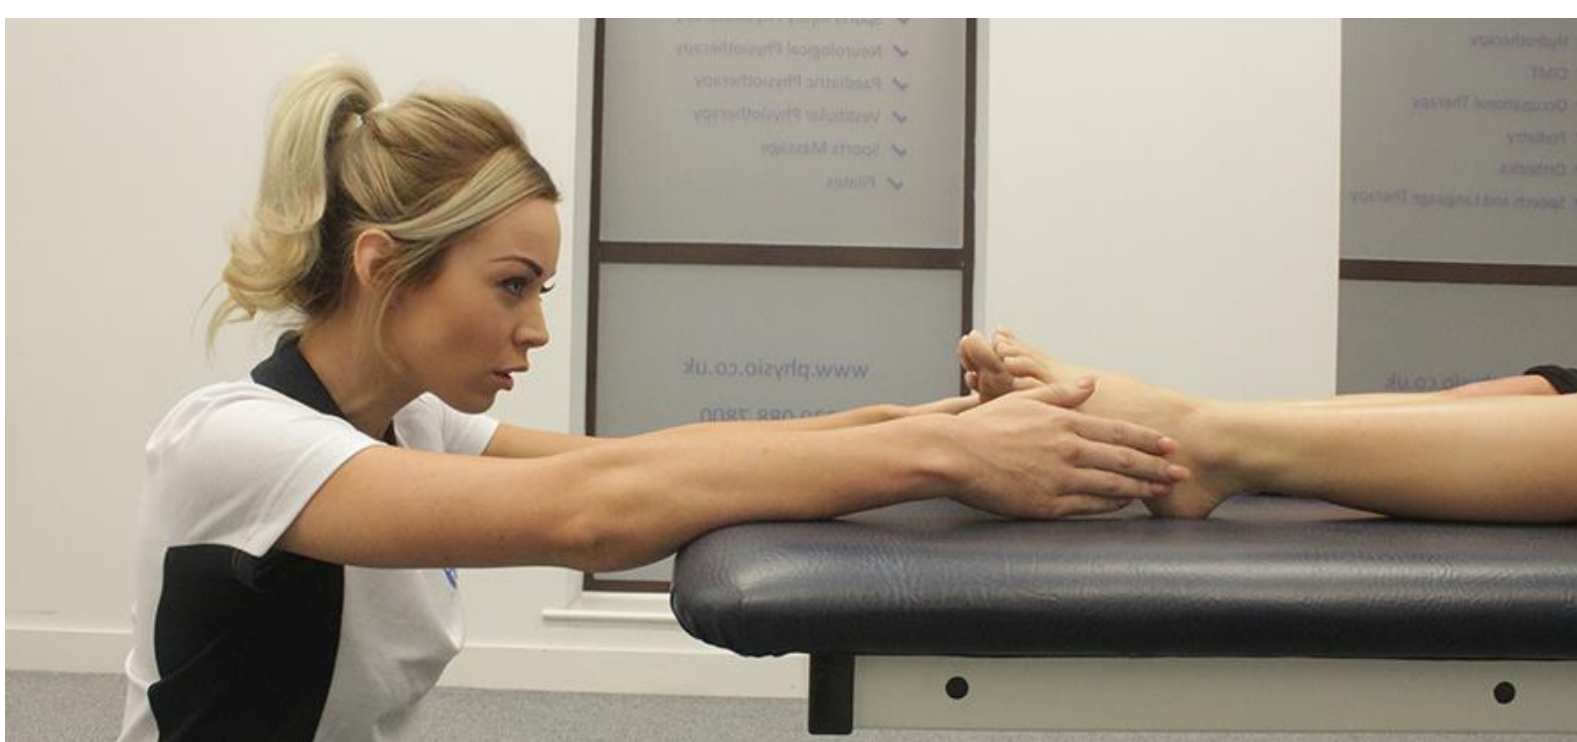

We always put patients at the
centre of everything we do

Curacorn contra-indications include:

- Pregnant or breast-feeding
- Sports persons have to be alerted on the fact that this product contains an active compound, which may lead to a positive reaction to doping tests
- History of hypersensitivity to one of the components of the products tested or of anaphylactic shock or severe allergy
- History of autoimmune disease or disease affecting the immune system (type 1 diabetes, polyarthritis, rheumatoid arthritis, ankylosing spondylitis, psoriasis, thyroid disorder, scleroderma, inflammatory intestinal disease, lupus, multiple sclerosis, ulcerative colitis)
- Unhealed skin alteration or infection present
- Complications after surgery during the past 5 years
- Previous injection of permanent products (silicone, acrylic polymers, dextran)

What can I expect?

Firstly, you will have an assessment to deem if Curacorn treatment is suitable for you, during this appointment the corn will be removed with a scalpel.

Following this if the podiatrist deems you suitable for the treatment, then this will be booked in up to a few weeks later.

During the Curacorn appointment, firstly the area will be anaesthetised, then a cannula is guided towards the corn where the gel is injected directly underneath it.

Any padding that is required will be applied at the end to aid off-loading of the area

The treatment will then be repeated a second time around a month later, then a third time if required another month later.

YOU WILL BE REQUIRED TO NOT WALK / WEIGHT BEAR ON THE AREA FOR 24 HOURS POST TREATMENT – OR THE TREATMENT WILL NOT SET AND BE INEFFECTIVE

Prices

ASSESSMENT

- Podiatry assessment - £55

CURACORN TREATMENT – PER TREATMENT

- Curacorn (toe) - £110
- Curacorn – plantar (bottom of the foot) - £140

Usually maximum of 3 treatments is required, very rarely for severe corns more may be needed.
